About Exambible

Your Partner of IT Exam

Found in 1998

Exambible is a company specialized on providing high quality IT exam practice study materials, especially Cisco CCNA, CCDA, CCNP, CCIE, Checkpoint CCSE, CompTIA A+, Network+ certification practice exams and so on. We guarantee that the candidates will not only pass any IT exam at the first attempt but also get profound understanding about the certificates they have got. There are so many alike companies in this industry, however, Exambible has its unique advantages that other companies could not achieve.

Our Advances

* 99.9% Uptime

All examinations will be up to date.

* 24/7 Quality Support

We will provide service round the clock.

* 100% Pass Rate

Our guarantee that you will pass the exam.

* Unique Gurantee

If you do not pass the exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!

1. Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1. Server1 runs Windows Server 2012 R2 and has the Hyper-V server role installed.

On Server1, you create and start a virtual machine named VM1. VM1 is configured as shown in the following table.

You plan to create a checkpoint of VM1.

You need to recommend a solution to minimize the amount of disk space used for the checkpoint of VM1.

What should you do before you create the checkpoint?

- A. Decrease the Maximum RAM.
- B. Convert Disk1.vhd to a dynamically expanding disk.
- C. Run the Stop-VM cmdlet.
- D. Run the Resize-VHD cmdlet.

Answer: C

2. Your network contains a server named Server1 that runs Windows Server 2012. Server1 has the Hyper-V server role installed.

Server1 hosts four virtual machines named VM1, VM2, VM3, and VM4.

Server1 is configured as shown in the following table.

You install a network monitoring application on VM2.

You need to ensure that all of the traffic sent to VM3 can be captured on VM2.

What should you configure?

- A. NUMA topology
- B. Resource control
- C. Resource metering
- D. Virtual Machine Chimney
- E. The VLAN ID
- F. Processor Compatibility
- G. The startup order
- H. Automatic Start Action
- I. Integration Services

J. Port mirroring

K. Single-root I/O virtualization

Answer: J

3. Your network contains a server named Server1 that runs Windows Server 2012. Server1 has the Hyper-V server role installed.

Server1 hosts four virtual machines named VM1, VM2, VM3, and VM4.

Server1 is configured as shown in the following table.

You plan to schedule a complete backup of Server1 by using Windows Server Backup.

You need to ensure that the state of VM1 is saved before the backup starts.

What should you configure?

A. NUMA topology

B. Resource control

C. Resource metering

D. Virtual Machine Chimney

E. The VLAN ID

F. Processor Compatibility

G. The startup order

H. Automatic Start Action

I. Integration Services

J. Port mirroring

K. Single-root I/O virtualization

Answer: I

4. Your network contains a server named Server1 that runs Windows Server 2012. Server1 has the Hyper-V server role installed.

Server1 hosts four virtual machines named VM1, VM2, VM3, and VM4.

Server1 is configured as shown in the following table.

VM3 is used to test applications.

You need to prevent VM3 from synchronizing its clock to Server1.

What should you configure?

- A. NUMA topology
- B. Resource control
- C. Resource metering
- D. Virtual Machine Chimney
- E. The VLAN ID
- F. Processor Compatibility
- G. The startup order
- H. Automatic Start Action
- I. Integration Services
- J. Port mirroring
- K. Single-root I/O virtualization

Answer: I

5. Your network contains a server named Server1 that runs Windows Server 2012. Server1 has the Hyper-V server role installed.

Server1 hosts four virtual machines named VM1, VM2, VM3, and VM4.

Server1 is configured as shown in the following table.

VM2 sends and receives large amounts of data over the network.

You need to ensure that the network traffic of VM2 bypasses the virtual switches of the parent partition.

What should you configure?

- A. NUMA topology
- B. Resource control
- C. Resource metering
- D. Virtual Machine Chimney

- E. The VLAN ID
- F. Processor Compatibility
- G. The startup order
- H. Automatic Start Action
- I. Integration Services
- J. Port mirroring
- K. Single-root I/O virtualization

Answer: K

6. You perform a Server Core Installation of Windows Server 2012 R2 on a server named Server1.

You need to add a graphical user interface (GUI) to Server1.

Which tool should you use?

- A. The imagex.exe command
- B. The ocsetup.exe command
- C. The setup.exe command
- D. The dism.exe command

Answer: D

7. You have a server named Server1 that runs Windows Server 2012 R2.

You plan to create an image of Server1.

You need to remove the source files for all server roles that are not installed on Server1.

Which tool should you use?

- A. dism.exe
- B. servermanagercmd.exe
- C. ocsetup.exe
- D. imagex.exe

Answer: A

8. You have a server named Server1 that runs Windows Server 2012 R2. Server1 has following storage spaces:

Data

Users

Backups

Primordial

You add an additional hard disk to Server1.

You need to identify which storage space contains the new hard disk.

Which storage space contains the new disk?

A. Primordial

B. Data

C. Backups

D. Users

Answer: A

9. Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1. Server1 runs Windows Server 2012.

You create a group Managed Service Account named gservice1.

You need to configure a service named Service1 to run as the gservice1 account.

How should you configure Service1?

A. From a command prompt, run ss.exe and specify the config parameter.

B. From a command prompt, run ss.exe and specify the sdset parameter.

C. From the Services console, configure the General settings.

D. From Windows PowerShell, run Set-Service and specify the -PassThrough parameter.

Answer: C

10. You have a server named Data1 that runs a Server Core Installation of Windows Server 2012 R2 Standard.

You need to configure Data1 to run a Server Core Installation of Windows Server 2012 R2 Datacenter. You

want to achieve this goal by using the minimum amount of administrative effort.

What should you perform?

- A. An online servicing by using Dism
- B. An offline servicing by using Dism
- C. An upgrade installation of Windows Server 2012 R2
- D. A clean installation of Windows Server 2012 R2

Answer: A

11. Your network contains an Active Directory forest named contoso.com.

The forest contains two domains named contoso.com and child.contoso.com and two sites named Site1 and Site2. The domains and the sites are configured as shown in following table.

When the link between Site1 and Site2 fails, users fail to log on to Site2.

You need to identify what prevents the users in Site2 from logging on to the child.contoso.com domain.

What should you identify?

- A. The placement of the infrastructure master
- B. The placement of the global catalog server
- C. The placement of the domain naming master
- D. The placement of the PDC emulator

Answer: D

12. Your network contains an Active Directory forest that contains two domains. The forest contains five domain controllers.

The domain controllers are configured as shown in the following table.

You need to configure DC5 as a global catalog server.

Which tool should you use?

- A. Active Directory Administrative Center
- B. Active Directory Users and Computers
- C. Active Directory Sites and Services

D. Active Directory Domains and Trusts

Answer: C

13. Your network contains an Active Directory forest. The forest contains a single domain named contoso.com. The domain contains four domain controllers.

The domain controllers are configured as shown in the following table.

All domain controllers are DNS servers.

You plan to deploy a new domain controller named DC5 in the contoso.com domain.

You need to identify which domain controller must be online to ensure that DC5 can be promoted successfully to a domain controller.

Which domain controller should you identify?

- A. DC1
- B. DC2
- C. DC3
- D. DC4

Answer: C

14. Your network contains an Active Directory forest named contoso.com. All domain controllers currently run Windows Server 2008 R2.

You plan to install a new domain controller named DC4 that runs Windows Server 2012 R2.

The new domain controller will have the following configurations:

Schema master

Global catalog server

DNS Server server role

Active Directory Certificate Services server role

You need to identify which configurations cannot be fulfilled by using the Active Directory Domain Services Configuration Wizard.

Which two configurations should you identify? (Each correct answer presents part of the solution. Choose two.)

- A. Enable the global catalog server.

- B. Transfer the schema master.
- C. Install the Active Directory Certificate Services role.
- D. Install the DNS Server role.

Answer: BC

15. You have a server named Server1 that runs Windows Server 2012.

You promote Server1 to a domain controller.

You need to view the service location (SRV) records that Server1 registers in DNS.

What should you do on Server1?

- A. Open the Netlogon.dns file.
- B. Run ipconfig /displaydns.
- C. Run Get-DnsServerDiagnostics.
- D. Open the SrC. sys file.

Answer: A
